OFFER SUMMARY

VOX
DESIGNERS

We know that the more talented
the people, the greater their ideas.
That's why when we work on our collections
we invite talented designers to join our
creative search.
In this way, thoughts and expectations
materialize into beautiful and useful products.

NATALIA POLAKOWSKA

Designer in the field of industrial and graphic design. She graduated from the Academy of Fine Arts in Łódź. Holder of a scholarship from the Ministry of Culture and National Heritage.

In her work, she most often combines design with the technological issues of synthetic materials production. She adheres to the principle that a designer must listen to the needs of the clients, designing not merely in accordance with trends but also with practicality in mind.

At VOX, she is a designer of façade and wall systems and skirting boards. In her designs, she mainly uses her knowledge of materials and technology.

LIDIA GALICA

She holds a degree in graphic design from the University of Fine Arts in Poznań.
Her graphic works have been exhibited in Poland, Bulgaria, Romania and Italy.

She believes that every person, object and space has its own rhythm, colour and structure that unlimitedly shape the world – from relationships, development, physical presence in space, to products, brands and the digital world. She loves to analyse this uniqueness by capturing current needs and juxtaposing them with trends to create her next projects.

She has been with the VOX brand since 2019. She is a graphic designer, looking for inspiration and analysing it. She designs decorative wall patterns. In her projects she combines traditional techniques with digital media.

KATSIARYNA BIRUKOVA

Graduate of the University of Fine Arts in Poznań. Participant of the 20th edition of the 2020/21 Education and Design Programme. Her works have been displayed at Warsaw Home, Arena Design in Poznań and the Łódź Design Festival.

In design, people are her biggest inspiration for her. She believes that it is worth having a certain sensitivity and empathy to design for them, to feel and analyse their needs and solve usability problems.

She has been working with the VOX brand since 2021. She designs furniture and façade cladding patterns.

THINKING ABOUT NATURE

Taking care of the environment is our common duty – both on an individual and business level. When creating the VOX offer, we analyze the production opportunities on an ongoing basis, and we make every effort to ensure that the carbon footprint that we leave in the ecosystem is as low as possible. Modern technological lines, the use of high-quality raw materials, recipes improved over the years and well thought-out design of the products themselves allow to maintain their excellent technical parameters and functionality.

RECYCLING

Kerrafront panels contain up to 20% recyclates and, including dedicated finishes, can be 100% recycled.

DURABILITY

The product warranty is 10 years excluding discolouration.
This means that a façade made using Kerrafront panels will not require repair or replacement during this period.

MAINTENANCE

There is no need for maintenance over the entire lifetime,
and therefore no additional chemicals (paints, preservatives, etc.)

INSULATION

The use of the Kerrafront ventilated façade ensures
the proper functioning of the insulation layer and
minimizes the risk of wall dampness and mould formation.

HEALTH

Our products are safe for health and do not contain harmful substances. No lead, cadmium, barium or other heavy metal compounds are used in the production process.

SUSTAINABLE DEVELOPMENT POLICY

WE KEEP OUR PROMISES: CUSTOMERS APPRECIATE OUR SERVICE

We want customers to appreciate our quality of service. At each stage of our work, we ask whether our action brings added value to the client. Therefore, they took care of the details and nuances, so that the customer experience throughout the purchasing process was unique and built a positive image of our company for years. We keep our promises in every way. Starting with timely deliveries and quality standards, and ending with individual arrangements with customers. We do everything in our power to ensure that the quality of our products complies with the requirements. In the event of errors, we make every effort to ensure that the repair process is as short as possible and as customer-friendly as possible.

WE WANT TO BE BETTER EVERY DAY

Each operating unit strives for process optimization every day.
We are looking for small improvements, but also groundbreaking solutions. We are not afraid to experiment.
We eliminate waste and optimize our costs. We are looking for modern technical and organizational solutions.
We are ready for changes. Where possible, we act quickly and effectively. Where necessary, we act methodically and carefully. We want our infrastructure to change and be more and more modern every year.
Our units are to be functional and efficient, but also to be our showcase.

WE OPERATE IN A SAFE AND RESPONSIBLE MANNER

We all are responsible for shaping safety-oriented mindset. We have the responsibility to send our people back home to their families in good health and we ensure safety of the factory continuity.
Need to be a responsible business, honest employer and good local neighbour, so by taking responsibility for social considerations, finance and the environment, always working for a sustainable future.

WE ARE THE TEAM

Each of us is different and everyone has different needs. We strive to use this diversity as part of teamwork.
The sum of the potentials and knowledge of team members determine its effectiveness and efficiency.
That is why we try to develop both teamwork skills and our own competences.
Respect and trust are the pillars of our cooperation. We help each other and solve problems together.
Freedom is our basic value. Freedom for us is the opportunity to search and experiment.
Freedom is the ability to argue and discuss freely.
Freedom is the right to constructive criticism and feedback.

KERRAFRONT.
CLADDING
FOR LIFE

Kerrafront is a facade cladding, which, once installed, does not require any maintenance during use.
Thanks to the innovative technology used, Kerrafront is extremely durable and resistant to changing weather conditions.
It protects the interior of the building and prevents heat loss.
It also provides good air circulation, thus preventing the formation of mould and fungus. Thanks to its elasticity, low weight and simple joining, its installation is quick and easy. It is 100% water resistant and the cut edges do not require any additional protection.
Kerrafront is divided into 5 collections among which we can choose from over thirty different colours.

Wood Effect, Alpine Oak, fourfold board FS-304

YOUR BEST CHOICE.
KERRAFRONT ADVANTAGES

Kerrafront cladding is a product with a number of unique features that distinguish it from the wide and diverse range of facade cladding. This comes from the unique combination of eye-catching aesthetics, technical parameters and exceptional performance features.

SAVING TIME AND MONEY DURING INSTALLATION:

- Easy and quick installation thanks to the low weight of the panels, wide coverage area, built-in locks and pre-cut mounting holes
- Material easy to work with – not susceptible to unsighty chips and cracks during shipment and installation
- Cut ends do not absorb water and after installation do not require any additional protection eg painting

NO MAINTENANCE REQUIRED:

- Virtually maintenance-free – no need for painting and other treatment
- Absolutely moisture resistant – does not absorb water and is not susceptible to freeze / thaw complications.
- Does not support bacterial or fungal growth

VOX QUALITY:

- Application of Kerracore technology in the production, which results in outstanding uniformity and density of the cellular core of the product. As a result boards feature dimensional stability and durability
- Matt surface of boards
- Connector – free joining with Connex System

Modern Wood, Quartz Grey, double board FS-302

DESIGN AND TECHNOLOGY

KERRACORE TECHNOLOGY

The Kerrafront cladding owes its unique properties to a well-thought-out structure. Thanks to the Kerracore technology, the panels are extremely durable: the core of foamed polymer makes the product very large mechanical strength. On the other hand, the hard polymer top layer makes it scratch and impact resistant, while being a carrier of texture and durable color.

COLOURS

The variety of patterns in Kerrafront collections is another great advantage of these claddings. The offer includes three categories of decors:

Unicolor decors – twelve universal colours – from subtle shades of cream and beige to darker colours for a stronger effect.

Wood-like decors – they are deceptively similar to natural wood, reproducing the nuances found in nature.

Modern decors - available with a natural stone pattern and with stylish paper and chiseled textures, available for selected panels in solid colours.

TEXTURES

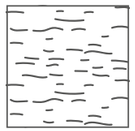

Kerrafront panels are available in five variants of textures that complement the offered colours. This combination allows you to achieve the desired design effect – from wooden, natural patterns to modern finishes.

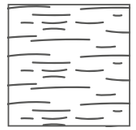

Delicate wood – a shallow wood texture, drawing of large wood grains

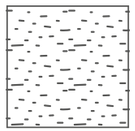

Brushed wood – delicately felt texture of brushed wood, natural grain pattern

Modern wood – clearly perceptible wood texture, dense grain pattern

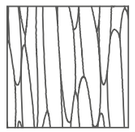

Concrete – reflects the natural, granular structure of concrete

Paper – modern texture inspired by the surface of handmade paper

Chiseled – modern texture inspired by the surface of chiseled wood

PERFECT FOR MOBILE CONSTRUCTION

Kerrafront is a product with a very universal application: it is perfect for single-family housing, terraced and mobile construction.
Kerrafront claddings are aesthetic, easy to install and use.
The light and easy-to-process panels are an excellent cover for building insulation and ensure proper ventilation of the walls.
These advantages appreciate our partners from the mobile construction industry.

Wood Effect, Concrete Oak, double board FS-304

Wood Effect, Malt Oak, single board FS-201

WOOD EFFECT COLLECTION

Timelessness is a feature that distinguishes the Wood Effect collection.
It uses wood patterns in an interesting range of colors, and the use of modern technology has resulted in a unique, aesthetically and functionally, cladding.
Its production uses high-quality foil resistant to external factors, which guarantees long-term, trouble-free use.
The collection is enriched with color-matched finishing trims.

TREND COLLECTION

The Trend collection is inspired by stone and minerals.
It comes in three variants: Effect in premium foils, Stone - with natural stone pattern
and Soft with a subtle, one colour shade. Thanks to the shape of the borads, it is possible
to create a flat facade surface, and the freedom of vertical and horizontal
installation allows it to be combined with other materials.

CONNECTOR ENDINGS Z-301

Connector endings Z-301 are dedicated to the FS-301 panels and allows to connect them along the length. Z-301 elements can be used both for panels mounted horizontally and vertically. Z-301 enable combining FS-301 panels in various decors and creating patterns from panel sections of different lengths. They applie to panels cut to a max. length 2 m. Z-301 are available only in black.

MODERN WOOD COLLECTION

Modern Wood is a cladding that perfectly combines natural design with functionality typical of modern technological solutions. Its aesthetics refer to modern wooden facades, but it retains the advantages of foamed technology, i.e., it is resistant to moisture, impacts and requires no maintenance. Modern Wood panels have a matte finish and come in seven colours – from natural, warm tones to various shades of grey.

OPTI COLLECTION

Opti collection is characterised by a flat and modern shape
that perfectly meets contemporary aesthetic standards in architecture.
The innovative design allows connecting panels in such a way as to create a smooth
and uniform surface, with subtle connections that harmonize with the structure
on the panels. The collection is available in two modern lines — Paper and Chiseled.

DESIGNER LIDIA GALICA

The structure of the façade panels draws inspiration from traditional craftsmanship, transferring the characteristic chisel grooves to modern materials.
This subtle reference to the handiwork of a craftsman has been interpreted in a minimalist and universal way, emphasizing the timeless dialogue between form and material.

The surface of the panels reflects rhythmic recesses and lines that give it a unique, subtle character. The structure makes the surface of the panels play with light, changing depending on the viewing angle and time of day, giving the building lightness and dynamics.

CLASSIC COLLECTION

The Classic collection will fit well both with buildings with a traditional appearance, and those with a more modern shape and structure. It consists of nine universal colours – from light beige, through grey and brown to anthracite.
The boards have a wood texture and a matte surface, thanks to which the facade will charm with its beautiful appearance for many years.

KERRACORE TECHNOLOGY

SURFACE LAYER (HARD PVC)

Made with polymers hardened during the technical treatment process. Shock- and scratch-resistant, it holds the colour and the unique structure resembling natural wood.

The method of finishing the top layer of panels varies depending on the collection and decors:
- By adding a dye to the surface layer in the case of all colours uniform.
- Through the use of foils in Wood Effect and Trend Effect colours.

CORE (FOAM PVC)

Made with a specially-selected mix of minerals and polymers.
Characterised by uniformity and a low density which results in the product being very resistant to mechanical damage.

Modern Wood, Claystone, double board FS-302

PROFILES AND ACCESSORIES

All profiles and accessories are available in colors matching the panel decors.

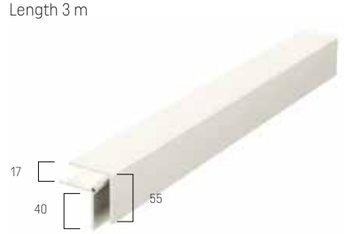

The trims for the foiled collections are available in the same foils as the panels. The exception is the universal corner (FS-222), where the foil covers its outer part, while the inner one is in a matching uniform colour.

Joint covers are available only in uniform colours and and applies only to FS-201, FS-201 and FS-302 panels.

JOINING THE PANELS: CONSTRUCTION

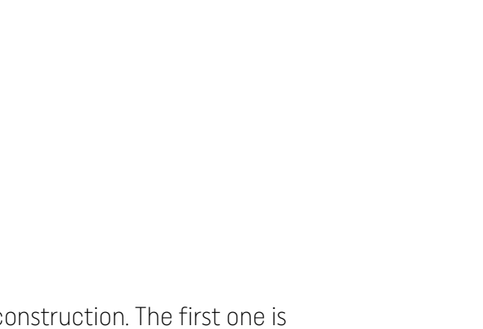

There are two ways of joining panels only by using it's construction. The first one is Connex & Connex II System used in panels FS-201, FS-301 and FS-304, the second one is easyJoin lock designed exclusively for panels FS-101.

1 JOINING USING THE CONNEX SYSTEM

The Connex System is available for panels with a length of 2.95 m. They are connected by built-in locks and no additional accessories are required. It is almost invisible.
The offer already includes FS-304 panels in the new Connex II (Click&Push) System, where the improved construction of the locks ensures even better and a more permanent connection. Due to the unique solution, the Connex II (Click&Push) system is a registered industrial design.

JOINING THE PANELS: ACCESSORIES

Among various accessories that make Kerrafront a well-thought-out, easy-to-install facade, there are four elements that allow you to connect panels up to 6 m long.

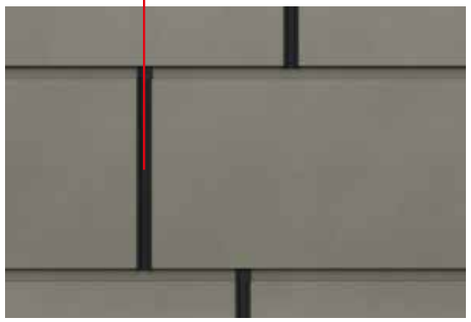

1 JOINING USING ADDITIONAL ACCESSORIES

Joint covers J-201 and J-202 are used to connect the panels FS-201 and FS-202 with a length of 6 m. J-302 is used to connect the panels FS-302.

Z-301 Connector endings are dedicated to the FS-301 panels allows to connect them along the length.
